Programmable Squelch Level

Programmable and Adjustable Squelch level through PC Software enhances sound quality!

Auto Power Saving

Activating the Auto Power Saving minimize the power consumption and increase talk time and standby time. It also increases the life of the battery. Auto Power Saving mode switches to normal mode on receiving signals and vice versa.

Emergency alarm

Pressing the emergency call generate a loud siren sound that alerts groups of workers or partners in case of fire, accidents or dangerous situation.

Channel Annunciation

Channel Annunciation announces present channel when switching channels making it affirmative and convenient for user in case of darkness or poor visibility.

PC programmable

With the optional programming cable, the parameters on the radio could be configured by PC software.

Clone Data

Using the PC software, you can clone the radio data from another with the data cable more accurately and quickly saving time in parameter setting.

F

unctions

Multiple Scanning

Scan Channel is convenient for the team leader to monitor the on-site situations. The scanning mode and scanning priority is programmable.

10 Preprogrammed Channels

10 programmed and one channel scanner provides flexible channel assignments among different usergroups.

Low Battery Alert

When the battery power is low, The LED flashes red light reminding to replace or recharge the battery.

Time Out Timer

When TOT is switch on and the Transmission exceeds the preset time limit, the radio stops transmitting after warning tone. TOT can prevent the radio from any potential damage caused by prolonged transmission and maintain network discipline.

Busy Channel Lockout

BCL is used to prevent the interference with the on-going conversation. If BCL is "ON" and you press the PTT button, the radio will not transmit signals and remain in the receiving mode to avoid interfering with others that are in the communication.

Monitor

This function monitor whether the current channel has any signal, the monitor function is to receive weak signal.
